

Government Engineering College, Patan
Electronics & Communication Engineering Department

Event Report

Title	Inaugural Function of VLSI Club
Date and Time	15/10/2025 (Wednesday), 03:30 pm onwards
Mode of Conduct	Offline Mode
Venue	Seminar Room (204), EC Engineering Department, GEC Patan
Expert Details	Not Applicable
Organized By	EC Engineering Department, GEC Patan
Objective	The primary objective of the VLSI Club Opening was to: • Enhance students' awareness of VLSI design and semiconductor technologies. • Provide a platform for industry-oriented learning and skill development. • Encourage hands-on learning, innovation, and a culture of research. • Bridge the gap between academic knowledge and industry requirements. • Motivate students to explore career opportunities in the VLSI and semiconductor sectors.
Description	The Electronics and Communication Engineering Department of Government Engineering College, Patan, organized the VLSI Club Opening on 15th October 2025. The event commenced with the formal inauguration of the club by Principal Dr. B. J. Shah, Dr. A. B. Dhruv (Professor-Mechanical), and Dr. D. H. Patel (HoD-EC). The VLSI Club has been established to strengthen students' technical competencies in the domain of Very Large-Scale Integration (VLSI). Faculty Coordinator Prof. M. L. Patel addressed the gathering, outlining the VLSI Club's vision, mission, and scope. During the session, the significance of VLSI technology in modern electronics was emphasized, particularly in areas such as semiconductor chip design, embedded systems, Artificial Intelligence hardware, and the Internet of Things (IoT). Proposed activities of the club include: • Technical workshops • Expert lectures • Hands-on training with EDA tools • Student mini projects. • Technical competitions
Participants	• Undergraduate students of the Electronics and Communication Engineering Department (Total: 30)
Outcomes	The session successfully achieved the following outcomes: • Students developed a fundamental understanding of VLSI technology. • Participants gained knowledge of semiconductor basics and chip design concepts. • Students became aware of career opportunities available in the VLSI and semiconductor industries. • The interactive discussion enhanced students' confidence and clarified their queries regarding higher studies and industrial careers. • The session motivated students to pursue advanced learning in VLSI and related domains.
Conclusion	The VLSI Club Opening was successfully conducted, aligning with the objectives of outcome-based education and continuous improvement as per NBA and NAAC quality standards.
